

**CITY OF LAKE OZARK  
PLANNING AND ZONING DEPARTMENT  
LOT COMBINATION APPROVAL PROCESS**

When specified conditions occur, two existing parcels of land may be combined into one lot using a simplified procedure instead of a formal plat. This procedure, known as a lot combination, is faster and less costly to follow, but can only be used if all the criteria specified in the subdivision regulations are followed.

The applicant shall meet with Zoning Administrator to receive an explanation of the lot combination procedures, including its requirements and limitations.

The lot combination application shall be completely filled out and returned to the Office of the Zoning Administrator with a fee of fifty dollars (\$50.00). As a part of the application, four (4) copies of a scale drawing shall be submitted showing the boundaries of the existing parcel; the location of all structures; the precise nature of the proposed combination; the legal description of the lots to be joined; and the name, signature, and seal of the licensed engineer or the registered land surveyor who prepared the drawing. An application shall not be processed until it has been fully completed, the appropriate fee paid, and all requested information submitted.

The Zoning Administrator shall review the proposed lot combination at a regular scheduled meeting based on the criteria specified in the adopted subdivision regulations.

The Zoning Administrator shall, within thirty (30) days of application, in writing, ratify or not ratify, or continue for cause those applications which, in its opinion, do not comply with the Subdivision Regulations.

No building permit shall be issued for any site which contains a division of a platted lot of record, unless such division has been ratified in the manner provided in the subdivision regulations.

Items required for submission of a lot combination include:

1. Four (4) copies of a scaled drawing, including certification pages.
2. Legal description of lots to be joined.
3. The location of any structures on the lot or lots thereon, together with the precise nature, locations and dimensions.
4. The name, signature, and seal of the licensed engineer or registered land surveyor who prepared the drawing.
